

Apptio Solution for

Federal IT Spend

Align resources. Reduce risk. Maximize mission objectives.

Budget formulation, budget execution, and operational run processes are disconnected

There is no system providing stakeholders a full lifecycle view of financial metrics. There is no visibility into what has already been spent, or what will be spent—and how those dollars translate to actual mission initiatives and value.

Manually-updated spreadsheets lack the efficiency of automation and complicate insights hunting. Simple questions (“Did what I plan to spend actually get spent to support the mission?”) confound consultancy-created, remedial, and temporary solutions. Limited analytics pump the brakes on decision-making—delaying innovation and the consistent delivery of mission services.

Without a reliable, repeatable, and sustainable solution, managing multi-year funding attached to various time-bound appropriations is tedious, error-prone and difficult to track.

Duplication and waste put Agency and Mission Owners at risk as dollars initially obligated may go unspent or are redirected to initiatives that are misaligned to mission priorities.

In short, there is no way to quantify the value of IT to support the mission and delivery of key agency services or track the dollars at risk of being lost.

Fortunately, there’s a better way

Apptio is the Technology Business Management (TBM) solution of choice for the public sector, and to date has worked with over 15 federal agencies. Apptio delivers an automated solution to manage the disparate functions of budget formulation, execution, and operations to drive alignment of resources to top mission priorities.

Apptio’s 360-degree financial view manages the complexities of multi-year appropriations and budgets including obligations, commitments, and expenditures with a repeatable TBM solution that analyzes IT cost, utilization, and consumption to enable real time decisions, prevent waste, and align resources. In doing so, agencies reduce risk and maximize their ability to deliver mission services.

Key Benefits

Increase accountability for IT spend with an automated system based on shared context.

Spend smarter and fund innovation by employing insights to shift underutilized spend.

Make informed decisions by proactively managing IT costs and trends, prioritizing cloud decisions, and managing application portfolios.

Demonstrate IT value by aligning project resources to mission priorities.

Automate the recovery of IT service consumption with a trustworthy and actionable cost recovery solution.

Deliver a user-friendly bill with accurate IT costs and defensible allocations that influences demand, drives behavior change, and improves partnership with agency stakeholders.

Build your spend plan to serve your mission

- Manage your multi-year budgeting cycle and align to goals.
- Direct resources to critical mission needs.
- Maintain visibility on a centralized planning process and forecast spend accurately.
- Drive stakeholder accountability and act when variances occur.

“TBM introduces a new dimension and a fluidity between the finance view, the IT view, and the business view – whereas our budget structure is built on the program and project view that Congress wants to see. Even though we don’t charge our customers for a service, we will be able to see what that service is costing us. It’s all about what we can do to enhance that service—and what value it brings to the Veteran experience. So this enhanced transparency is important for me, as a CFO, just to understand where the money is going.”

Willie Gaddis,

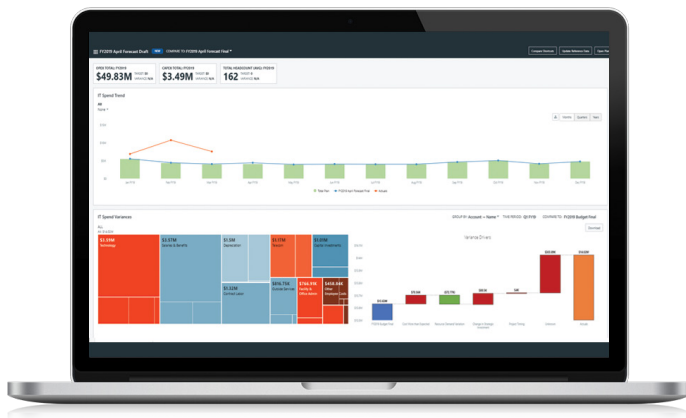

CFO for the Office of IT, Dept. of Veterans Affairs

Optimize the mission

- Avoid risk and waste by aligning resources to mission goals.
- Uncover defensible insights to understand IT expenditures and free up funds for modernization.
- Capture full TCO to drive cost savings and optimization.
- Track burndown and identify variance across commitments, obligations, and expenses.
- Recover costs and drive behavior with service rates based on actual execution/planned spend.

Leverage automation

- Automate the planning process, move faster, and gain accuracy from a single-source-of-truth.
- Construct an accurate and accountable IT spend plan with a purpose-built system for tech spend owners.
- Optimize by adjusting resources as mission needs dictate.
- Proactively manage IT spend to budget.
- Understand infrastructure costs and trends and quantify the value of application portfolios.
- Prioritize public cloud decisions and drive shared accountability of IT costs.
- Automate monthly billing by easily showing IT spend by department & user.
- Automate showback to communicate impact of IT, or chargeback to recover costs.
- Choose subsidization strategies and set prices to drive demand, adoption & sunset of services.

“By using this approach, known as Technology Business Management, GSA has cut 17.8% from its IT budget over the past four years, or well over \$100 million recurring per year.”

David Shive,
General Services Administration, CIO

Get started

Apptio fuels digital business transformation. Technology leaders use Apptio's machine learning to analyze and plan their technology spend so they can invest in products that increase the speed of business and deliver innovation. By translating raw costs, utilization, and billing data into business-centric views, IT leaders shift spending from maintenance to growth.
